

## Product Information

# MLR FULLY SYNTHETIC CHAINLUBE

## Description

MLR Fully Synthetic Chainlube is a specially formulated aerosol designed for the protection of chains used in a variety of applications. This product is initially a thin flowing lubricant which when sprayed, searches and penetrates into the chain links and rollers. Within a few minutes the solvent carrier 'flashes off' and the product thickens and provides a strong, cushioning and lubricating, grease like coating on all parts. This coating has powerful anti-filing properties and is not displaced by the fast movement of the chain. Chain and sprocket wear is reduced to a minimum by the lubricant coating.

## Applications

MLR Chainlube is recommended for use on motorcycle chains, lift and drive chains, leaf and roller chains, conveyor system chains, etc.

### Notes on Usage:

Light treatment is highly recommended as part of regular routine maintenance. The film produced by MLR Chainlube is clear, but highly tenacious and therefore, excessive application of the product should be avoided.

## Physical Characteristics

### After Solvent Evaporation

Density at 15°C	0.903
Viscosity at 100°C, cSt.	2100
Flash Point (Closed) °C	184

Certificate No. FM 21756  
BS EN ISO9001 2000
